

LEAD QUALIFICATION SYSTEM (V1 – TEAM SOP)

Objective

- Process 10 leads
- Validate framework accuracy

TEAM STRUCTURE (7 PEOPLE)

1. Lead Collector (1 person)

- Collects job links and descriptions

2–4. AI Operators (3 people)

- Run leads through ChatGPT / Claude

5–6. Validators (2 people)

- Quick human validation

7. Reviewer (1 person)

- Final quality control
-

WORKFLOW OVERVIEW

Input → AI Processing → Sheet Update → Validation → Review → Final Output

STEP-BY-STEP EXECUTION

STEP 1: LEAD COLLECTION (Person 1)

Task:

- Collect 10 job listings from LinkedIn

Action:

Add to Google Sheet:

STEP 2: AI PROCESSING (Persons 2–4)

Tool:

- ChatGPT (primary)
- Claude (only when needed)

Method:

- Process in batches of 2–3 leads
 - Total ~4 prompts for 10 leads
-

Prompt to Use (Standardized)

Apply the lead qualification framework to each job below.

For each job:

1. Is this an execution role? (Yes/No + reason)
2. Is workload increasing? (1 line, no assumptions)
3. Are there repeated/similar roles? (Yes/No)
4. Final decision: KEEP or REJECT

If KEEP:

- Execution Signal (0–3)
- Hiring Intent (0–3)
- Company Fit (0–2)
- Remote (0–2)
- Buying Trigger (0–3)

Rules:

- Be strict
- Do not give all high scores

- Create variation in scoring and add the scores as required

Also include:

Rejected but Interesting (Yes/No)

Output in table format.

Claude Connector Use (Controlled)

Use Claude with:

- Google Sheets connector (optional)

Purpose:

- Read job description directly from sheet
- Write structured output back

Limit usage to:

- Maximum 3–4 leads total
-

STEP 3: UPDATE GOOGLE SHEET (Persons 2–4)

Paste AI output into sheet:

Add columns:

- Decision
 - Workload Insight
 - Execution Score
 - Hiring Intent
 - Company Fit
 - Remote
 - Buying Trigger
 - Total Score
 - Priority
 - Rejected but Interesting
-

STEP 4: HUMAN VALIDATION (Persons 5–6)

Time per lead:

5–10 seconds

Check only:

1. Is workload insight logical?
 2. Is role truly execution-based?
 3. Is score reasonable (not inflated)?
-

Action:

- If correct → mark “AI Correct = Yes”
 - If incorrect → fix manually and mark “No”
-

STEP 5: FINAL REVIEW (Person 7)

Check:

- Too many KEEP decisions
 - Too many high scores (12–13)
 - Weak or vague workload insights
-

Correct:

- Adjust decisions if needed
 - Normalize scoring distribution
-

STEP 6: FINAL OUTPUT

Filter sheet:

- Priority = High

This is the final lead list.

GOOGLE SHEET STRUCTURE

Columns:

1. Job Link
 2. Company
 3. Role
 4. Job Description
 5. Decision
 6. Workload Insight
 7. Execution Score
 8. Hiring Intent
 9. Company Fit
 10. Remote
 11. Buying Trigger
 12. Total Score
 13. Priority
 14. Rejected but Interesting
 15. AI Correct (Yes/No)
-

AI USAGE CONTROL

ChatGPT:

- Use batching (2–3 leads per prompt)
- Total prompts: 4–5

Claude:

- Use only for edge cases
- Max usage: 3–4 leads

Do NOT:

- Process each lead individually
- Run full framework repeatedly
- Re-run same lead multiple times

EXPECTED OUTPUT (FOR 10 LEADS)

- 10 leads processed
 - 3–5 KEEP
 - 1–2 High priority
-

QUALITY CONTROL RULES

- If most leads are KEEP → filtering is weak
 - If most scores are high → scoring is inflated
 - If workload insights are generic → AI prompt needs correction
-

SUCCESS CRITERIA

After 10 leads:

- At least 70–80% “AI Correct = Yes”
- Clear separation between high and medium leads
- Leads usable for outreach

TOTAL TEAM TIME (REALISTIC)

Stage	Time
Collection	10–15 min
AI Processing	12–15 min

Sheet Update 5 min

Validation 5–8 min

Review 5–10 min

TOTAL 45–60 min
